Envelope Testing

October 12, 2010

5:30 Reception 6:00-7:30pm Presentation
Masonry Institute of St. Louis
1429 S Big Bend Blvd

An Introduction, A Case Study, A Panel Discussion

If you are an owner, a designer, construction manager, or a subcontractor, and you are not familiar with envelope testing you can not afford to skip this program.

Testing can be the difference between success and failure. All stake holders in the building have to be informed and understand testing for it to truly be a success.

We will review what testing is , why you test , how you test and what you test.

We will follow the introduction to testing with a panel discussion about the complex issues surrounding testing. The panel will takes quesitons from the floor.
